

- *XPONDR® is an electronic security products engineering and manufacturing company.*
- *XPONDR® supplies premium performance products for retailers to prevent shoplifting.*
- *XPONDR® is dedicated to providing effective security without shopper intimidation.*

*Formed in the USA in 1994, XPONDR is an electronic security company offering high performance merchandise security tagging products to retailers. The products rely on XPONDR's patented frequency division technology providing unique capabilities of performance and reliability. XPONDR markets directly through its sales subsidiary in the US and through exclusive dealers in Europe, the Far East, Australia and also through non-exclusive dealers elsewhere. Products range from the premium lines offered to the "designer fashion" apparel retailer, to the product offerings for developing country retailers having more value oriented needs.*

*XPONDR is the designer and manufacturer of all its products, with corporate offices in Largo Florida USA, direct sales reps in major cities in the US, and manufacturing facilities in China and the Caribbean island of Haiti.*

*The primary focus of the company is to provide the apparel retailer with more effective and trouble free solutions to the growing shoplifting and employee related theft problems. The company is dedicated to providing these products and serving the retailer without interfering with store operations or detracting from the appearance of the stores with visible security panel devices at the entrance. XPONDR believes that effective security products can be used to reduce store merchandise shrink without having an intimidating appearance which makes shoppers uncomfortable and detract from an appealing, open and inviting shopping atmosphere in the store.*

*The premier product line of Invisible Loop Systems enable the store construction executives, architects, and designers to pursue the most open and creative store front layouts where the alternative cumbersome security panels were a distraction in store appearance and merchandising. These Loop Systems can be installed totally unseen in new construction or store re-fits, in all-glass store fronts, and even in the widest of mall entrances.*
